

Turn Transportation Documents into Trusted Operational Data

Saving a file isn't the same as being able to use it. Most of what your team uploads sits there, unsearchable, until someone opens it by hand. Document AI finishes the job: reading, classifying, and organizing every document into data you can actually search.

Core Capabilities

Classify Any Document

Bills of lading, proofs of delivery, invoices, rate confirmations, customs paperwork, and more, identified automatically.

Extract What Matters

Key data pulled from every page and structured the moment it's uploaded.

Search In Plain Language

Find anything in seconds. Search by shipment number, carrier, dollar amount, or just describe what you're looking for.

Trust What You See

Every extracted field includes a confidence score and page-level evidence, so you can verify results before they enter a workflow.

Process at Any Scale

One document or a full backlog, processed just as fast. No need to separate multi-page documents before uploading.

Key Features

Works With Any File

PDFs, images, spreadsheets, text files and more, up to 50MB each.

Fast, Automatic Processing

Every document handled in under a minute, no waiting in a queue.

Ready for Your AI

Give your AI Assistant or connected systems direct access to processed data.

Set Up Your Way

Use the default setup, or configure extraction to match exactly what your team needs.

Make Updates Anytime

Adjust any extracted value directly, and the update becomes part of the record.

Search Like You Think

Find documents by keyword, or just describe what you're looking for.

Built for Your Team

For Logistics Teams

Stop hunting through folders and reading documents one by one. Search your entire document archive the way you actually think about your freight, by shipment, carrier, or plain language.

For IT and Technical Teams

A REST API, configurable extraction, and native MCP Server access mean Document AI fits into the systems you already run instead of asking you to rebuild around it.

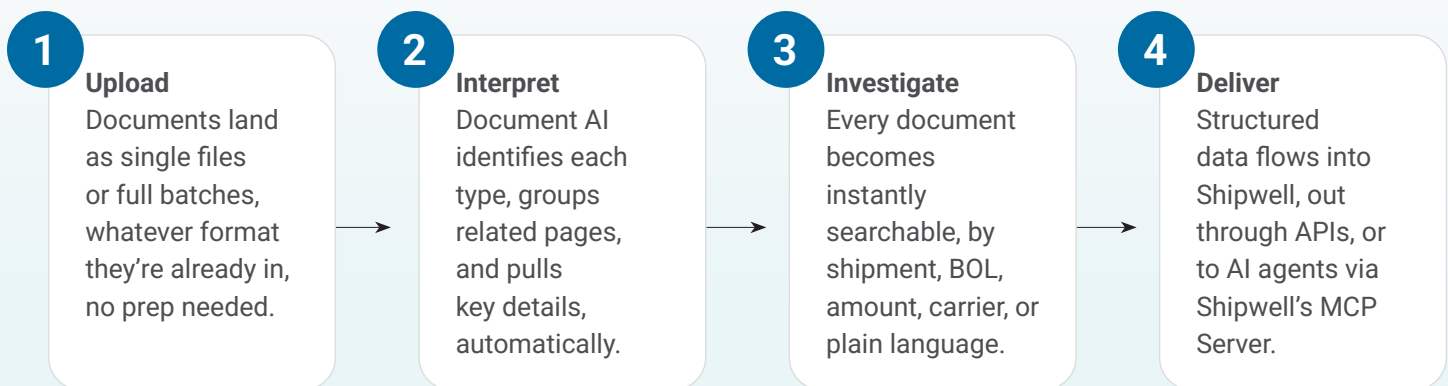

For Freight Audit and Payment

Resolve invoice and rate discrepancies faster with extracted data and page-level evidence available the moment a document lands, not after someone tracks it down.

For Trade Compliance

Confidence scoring and page-level evidence give your team a clear record to verify against before customs paperwork moves downstream.

From Attachment to Action

Independent, Not Isolated

Document AI runs as its own workspace, standalone by design, not by limitation. Through Shipwell's MCP Server, it plugs into the rest of your AI ecosystem: Shipwell's AI Workers and AI Assistant, your own enterprise chatbot, or custom agents your team builds.

- Works with Shipwell's AI Workers and AI Assistant
- Connects to your enterprise AI chatbot or systems
- Opens direct access for custom agents and automations

About Shipwell

At Shipwell, we empower supply chains with increased efficiency and service effectiveness at scale. Our solution combines everything shippers need, from transportation management and visibility to procurement, in a comprehensive, easy-to-use platform, so shippers can effectively operate, manage, and optimize their entire shipping process seamlessly. To learn more, visit www.shipwell.com.
